

Squares · any game

Sell every square first. Then draw the numbers 0-9 for each side (pages 3-4) and write them in the shaded strips.

How the pool works

1. Sell all 100 squares before any number is drawn. Players write their name in a square.
2. Draw the numbers 0-9 for the top team (page 3) and write them left to right in the shaded top strip.
3. Draw the numbers 0-9 for the side team (page 4) and write them top to bottom in the shaded left strip.
4. At the end of each quarter, take the last digit of each team's score. The square where the top team's digit column meets the side team's digit row wins that quarter.
5. Payouts (fill in): 1st quarter _____ Halftime _____ 3rd quarter _____ Final _____
6. A typical split at \$100 in: 20 / 20 / 20 / 40. If a quarter ends on the same digits as the last, that square wins again - or pay the reverse square (top and side digits swapped). Decide before you draw.
